(I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynuclectides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (II, by inserting the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK64703 and AAM62169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat disorders (e.g. vocal cord paralysis, consilittis, and laryngitis), lung disorders (e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polynucleotide sequences of the invention are useful in gene therapy and antisense therapy. AAS28161-AAS28764 represent genomic sequences encoding for novel human respiratory antigens. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention describes an isolated polypeptide (I) comprising an amino acid sequence that is at least 90% identical to polypeptide fragment of the polypeptide fragment of the polypeptide fragment of the polypeptide described fragment of the polypeptide described fragment of the polypeptide described fragment of the protein of ps, or variant, allelic variant or species homolog of ps. (I) or a polypucleotide (II) encoding (I) is also useful for diagnosing a polypucleotide fragment or susceptibility to a pathological condition or a susceptibility to a pathological condition in a subject which involves determining the presence or absence of mutation in a subject which involves determining the presence or absence of mutation of in (II) or determining the presence or absence of mutation of in (II) or determining the presence or absence of mutation of in (II) or determining the presence or absence of mutation of in (II) or determining the presence or absence of mutation of the polypeptides are useful in diagnosis, at the treatment, prevention and/or (II) in a condition based on the prognosis of disorders of respiratory system such as throat disorders (e.g., pneumonia), pleurisy, cystic fibrosis, emphysema, histiocytosis, and largic disorders (e.g., asthma and eosinophilic pneumonia), pleurisy, cystic fibrosis, emphysema, histiocytosis, and concers of the nose). The polynucleotides are useful in gene therapy techniques, for chromosome identification, identifying individuals from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention is related to a novel isolated polypeptide, which comprises a human respiratory system-related polypeptide, and the DNA sequence which encodes it. The invention may be useful for the development of compounds with an antiasthmatic, antibacterial, antiinflammatory, cytostatic, antianaemic or antiallergic activity. In addition, the sequences disclosed may be useful for gene therapy. The polypeptide or polynucleotide is useful for treating, preventing or ameliorating a medical condition, for example pneumonia, lung cancer, cystic fibrosis, asthma, sarcoidosis, rhinitis, anaemia, leukaemia, inflammations, sinusitis, chronic obstructive pulmonary disease or infectious diseases. The polypeptide or polynucleotide is also useful for diagnosing any of these diseases or a susceptibility to the disease. The present sequence is that of a human DNA sequence which is related to a business of the control of t

The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polynucleotide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the printed specification by was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                    19-MAY-1998;
21-JUL-1998;
22-DEC-1998;
                                                   degeneration caused by injury or diseases of nerves within the CNS or PNS. Such injury includes spinal cord injury, blunt trauma, penetrating trauma, haemorrhagic stroke or ischaemic stroke, whilst diseases include diabetic neuropathy, senile dementia, Alzheimer's disease, Parkinson's
                                                                                                         The present sequence is a gene encoding human myelin oligodendrocyte glycoprotein which is a nervous system-specific antigen. The antigen or peptides derived from it activate T cells in vivo. The present sequence is used to promote nerve regeneration or to prevent or inhibit neuronal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; myelin oligodendrocyte glycoprotein; MOG; NS-specific antigen; nervous system-specific antigen; T cell; peripheral nervous system; ENS; nerve regeneration; neuronal degeneration

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                             26-JUL-2001.
                                                                                                                     WO200153312-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human polynucleotide SEQ ID NO 5031.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; SEQ ID NO 672; 199pp; English.

                                                                                                                                                                                                                                                                                                                      immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheiner's, Parkinson's disease, Huntington's disease, such as Alzheiner's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Also described are: detecting a fibrotic disorder in a subject; modulating gene expression in fibrotic tissue; and an array comprising a substrate having addresses, where each address has a capture probe that can specifically bind at least one polymucleotide that is differentially expressed in fibrotic disorders, or its complement. The method is useful in identifying a modulator of at least one gene that is differentially-expressed in fibrotic tissue or during fibrogenesis, or a differentially-expressed in fibrotic tissue or during fibrogenesis, or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antiinflammatory; gene therapy;

                                                                                                                                                                               The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of modulating the activity of CAP; (iv) for a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (carcinoma; or arcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent (US2002182586A1, for which no sequence data was published

```
reoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in cy expression is indicative of anti-neoplastic activity. (I) has cytostatic gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producting a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oseophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

The CC products of the invention have antiinflammatory, cytostatic, antirheumatic and immunosuppressive activity and can be CC used for gene therapy. The reagent of the invention and any proteins and CC extractive derived from it, are used (i) for analysing tissue and blood samples for medical diagnosis; (ii) for diagnosis and characterisation of CC chronic joint diseases, on the basis of molecular characterisation, and CC extraining the etiological pathogenicity principle of as yet cuncharacterised inflammatory diseases, also monitoring progression and/or CC treatment of disease, and optimisation of therapy and (iii) for CC treatment of disease, and optimisation of therapy and (iii) for CC treatment of disease, and optimisation of therapy and (iii) for CC treatments for inflammatory diseases, particularly of joints, confections and tumours. ACA64801-ACA64965 represent human polynucleotides of used in the method of the invention

YISSUM RES DEV CO HEBREW UNIV JERUSALEM. HADASIT MEDICAL RES SERVICES & DEV LTD.

New kit comprising 10 and no more than 574 polynucleotides capable specifically binding at least one specific polynucleotide sequence, useful for determining predisposition of a subject to develop PTSD, for diagnosing PTSD. of. or

ID NO 22; 157pp; English.

The invention relates to a kit for determining predisposition of a cubject to developing post-traumatic stress disorder (PTSD) comprising at least 10 and no more than 574 polynucleotides, where each of the comprising the composition of a composition of the polynucleotides is capable of specifically binding at least one specific polynucleotides is capable of specifically binding at least one specific cited comprising the polynucleotides cited, and a microarray comprising cited comprising the polynucleotides cited, and a microarray comprising considered comprising the polynucleotides cited, and a microarray comprising considered comprising the polynucleotide sequence. The kit comprises each of the polynucleotide sequence is specifically binding at least one specific colored modern and an RNA molecule. Each of the polynucleotides is at least one colored and no more than 50 nucleic acids in length. Each of the polynucleotides is at least one reagent considered for detecting hybridization of the polynucleotides and at least one reagent constable for detecting hybridization of the polynucleotides and at least considered in the subject to developing properties at least one reagent considered in length. Each of the polynucleotides and at least considered in the subject to developing properties at least one reagent and instructions for using the kit in determining predisposition of at least one gene as a comparation of the subject to developing properties and at least one capable of regulating an expression level of a medicament identified for compression of a modern considered considered considered specification, but the manufacture of the invention. Note: The sequence considered the polynucleotide of the polynucleotide sequence. data for this patent did not form part of the printed specification, was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. but

                                                                                                                                                                                                                                                                                                                                        The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention
                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders digestive system, particularly cancer and cancer metastases.

The invention relates to novel genes (AAI62752-AAI62961) and proteins CC (AAM42347-AAM42415) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. CThe nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, by preast, gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic consemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, allergies, autoimmune haemolytic considerations schematoid arthritis and ulcerative colitis; (c) CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) CC cardiovascular diseases e.g. cerebral anoxia and epilepsy; and (f) CC infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly constructed and the format directly constructed and the format directly constructed specification, but was obtained in electronic format directly constructed specification, but was obtained pot sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel plasma membrane associated proteins useful for diagnosing, treating, preventing and/or prognosing disorders related to the including cancer, immune response and neuronal disorders.

  The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are
                                                                                                                                                                                               Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               granulocyte activation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease;

The present sequence represents a gene differentially capable conditions. The present sequence represents a gene differentially control of the printed specification, but was obtained in the control of the printed specification, but was obtained in the control of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to recombinant carcinoma associated (CA) nucleic CC acid sequences from mouse and human (ADA)1482-ADA)3094), and to CC carcinoma associated proteins (CAP) encoded by them. The CC invention also encompasses expression vectors and host cells comprising a CC nucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a biochip comprising CA nucleic acid or CC fragments thereof. The sequences of the invention were identified using CC oncogenic retroviruses, which insert into the genome of the host organism CC at random. Many of these do not carry transduced host oncogenes or CC pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host CC protococogenes. The CA nucleic acid sequences can be used to diagnose CC carcinoma (especially breast cancer, prostate cancer, lymphoma or CC leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular CC tissues. CA nucleic acids, proteins and antibodies are also useful as therapeutic agents and in screening and evaluating drug candidates. The CC genence of the invention. Note: The complete sequence data for this complete.

A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a human gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cancers, neoplasm, adenocarcinoma, or sarcomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant nucleic acid, useful for treating
                                                                                                                                                                                                                                                                                                                               8605

The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomas. Sequences given in ADC85215-ADC85514 represent CA genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ADC85254 standard; DNA;
                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human Arhgef1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-JAN-2004

cq neutralising the effect of a CAP and a method of diagnosing carcinoma or propensity to carcinoma. A method of evaluating the effect of a candidate carcinoma drug comprises administering the drug to a patient, removing a cell sample from the patient and determining alterations in the cell sample from the patient and determining alterations in the cell sample from the patient and determining alterations in the cell sample from the patient and determining the nucleotide sequence. A compression of a first individual and comparises determining the expression of cell consecutions comprises determining the expression of the gene from type of a first individual and comparing the expression of the gene from the second normal tissue type from the first individual or a second unaffected individual, where a difference in the expression indicates that the first individual has carcinoma. A method of inhibiting the activity of a CAP comprises binding an inhibitor to the CAP. Treating carcinomas comprises administering to a patient an inhibitor of CAP. CC the nucleic acid. It comprises contacting an agent specific for the CAP. The polypeptide specifically binds to the protein encoded by the nucleic acid. The nucleic acids are useful for preparing a composition for diagnosing or treating carcinoma e.g., classical ted (CA) nucleic acid of the invention. Note: The sequence data contained associated (CA) nucleic acid of the invention. Note: The sequence data contained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to new recombinant nucleic acids. The invention also relates to a host cell comprising a recombinant nucleic acid or expression vector, an expression vector comprising a recombinant nucleic acid, a recombinant protein, a method of screening for drug candidates, method of screening for a bioactive agent capable of binding to a carcinoma associated protein (CAP) encoded by a nucleotide sequence, a

                         are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                              WPI; 2003-328604/31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ACN45134 standard; DNA; 49745
                                                                                                                                                                                                                                                       The present invention relates to novel DNA and protein sequences which
                                                                                                                                                                                                                                                                                                                            Recombinant nucleic acid useful for diagnosis and treatment comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-MAR-2002; 2002US-00087192
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-FEB-2003; 2003WO-US006235

                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method of identifying candidate p53 pathway-modulating agents. The method involves screening for agents that modulate the activity of phosphatidylinositol biphosphate (PIB). The methods are useful for identifying candidate p53 pathway-modulating agents used as therapeutic targets for disorders associated with defective p53 function. They are also useful for modulating p53 pathway in a mammalian cell or for diagnosing or treating a disease associated with defective p53 function, e.g. cancers such as breast cancer, colon cancer, lung cancer or ovarian cancer. Sequences of the invention are useful for in vivo assays to test the activity of candidate p53-modulating agents or to assays to test the activity of pathway process such as apoptosis or cell proliferation. The present

The composition has anorectic activity. The polynucleotide composition may be used in gene therapy to treat the disorders of the invention. The composition is useful for disgnosing obesity related to the presence of a molecular variant of the MCHR1 gene or a susceptibility to the disorder. The MCHR1 protein or polynucleotide is useful for preparing a medicament for treating or preventing obesity related to the presence of a molecular variant of the MCHR1 gene. This polynucleotide presence of a molecular variant of the MCHR1 gene. This polynucleotide represents the melanin-concentrating hormone receptor 1 locus clone of the invention. This sequence is not shown in the specification. It has been taken from the GenBank accession number Z86090 provided in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel diagnostic polynucleotide composit The polynucleotide composition comprises: a sequence encoding a polypeptide with defined sequences given in the specification; a secapable of hybridizing to a melanin-concentrating hormone receptor (MCHR1) gene; a polynucleotide encoding an MCHR1 polypeptide; or a melanin-concentration polypeptide; or a melanin-concentration of the metallic polypeptide                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 122557
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Page; 76pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      presence of a the disorder.

(I) have cytostatic cq activity, and can be used in gene therapy and vaccine production. (I) cq proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For cq example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome cq that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) cq polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the cq protein. (I) proteins and polynucleotides may be used to prevent, cq diagnose and treat immune/haematopoietic related diseases, especially cancers and cancer metastases of haematopoietic acids and aka64703 to AAK87694 represent human immune/haematopoietic acids and aka62169 represent sequences used in the exemplification of the present invention of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
